

walks on stage, drop my phone Oops! I did it again.

Ninety percent of people drop their phone at least once a month.

If you are lucky, you'll end up with just a broken screen.

That's \$130 and 2 hours in repair shop.

Not so lucky and dropped your phone in water,

it's \$550 for an average new smartphone and 2-5 business days in shipping.

These add up to 4 years of lost work productivity and \$80 B in costs every year (the picture here shows \$1B. Yes you heard me right, \$1 B as 9 pallets of \$100 bill stacked 39" high).

We are ON SPOT to save you from this frustration and, of course, who does not want to save money and time.

Ninety percent of people **drop** their phone *at least once a month*.

87% of millennials would **never** part from their phone,

even while they are sleeping.

But even though they love their phones,

millennials are **16** percent more likely to break their phone.

The age of bulky feature phones is over. The time of smartphones has come.

These incredibly powerful, yet fragile smartphones are essential to our lifestyles.

But smartphones come with a price, and a **hefty** price I must say.

Smartphones are **twice** as expensive as feature phones.

With ON SPOT, you can be with your **precious** phone, all times, no strings attached, but... rings attached.

It means no more dropping your phone in the creek, but taking bold selfies on 14ers, and catching Pokemon on the go.

With ON SPOT you can take pictures; anytime, anywhere.

We are leveraging the might of CU Boulder and our potential customers to strengthen our brand.

Based on the preliminary market research at 20% sale rate, we are projecting an estimated 6,400 unit sold at CU Boulder in next quarter. For a sale price of \$11.95, with a gross margin of 30% we are expecting to generate \$23,000 in profits.

If you would like to be a mentor for ON SPOT, come find us after the pitch.

We are ON SPOT and we help you stay safe, stay connected and mostly importantly stay ON SPOT.
